

- 78. The method of claim 77, wherein the DNA molecule is formed by mutating a DNA molecule encoding the amino acid sequence of the reference protein to alter the amino acid sequence of one or more epitopes.
- 79. The method of claim 77, wherein the DNA molecule is formed by synthesizing a DNA molecule encoding the amino acid sequence of the selected variant, which has an altered amino acid sequence of one or more epitopes of the reference protein.
- The method of claim 77, wherein the reference protein is an industrial enzyme.
- 81. The method of claim 80, wherein the enzyme is a detergent enzyme.
- The method of claim 81, wherein the detergent enzyme is an amylase, cellulase, lipase, 82. oxidase, or protease.
- 83 The method of claim 77, wherein the reference protein is a process enzyme.
- 84. The method of claim \$3, wherein the process enzyme is an amylase, cellulase, lipase, or lyase.
- 85. The method of claim 77, wherein the reference protein is a medicinal protein.
- 86. The method of claim 85, wherein the medicinal protein is a hormone or medicinal enzyme.
- A method for producing a DNA molecule encoding a variant of a reference protein having a known amino acid sequence, comprising
 - raising polyclonal antibodies against the reference protein; (a)
- (b) mapping one or more epitopes of the reference protein with immunological and proteochemical techniques by:
 - (i) incubating the polyclonal antibodies with the reference protein or with a variant thereof; and
 - incubating the mixture from step (i) with another protein selected from the group consisting of the reference protein and variants thereof;

- forming a DNA molecule encoding the amino acid sequence of a selected variant, (c) which has an altered amino acid sequence of one or more epitopes of the reference protein, wherein the selected variant evokes a lower immunogenic response in an animal than the reference protein.
- 88. The method of claim 87, wherein the DNA molecule is formed by mutating a DNA molecule encoding the amino acid sequence of the reference protein to alter the amino acid sequence of one or more epitopes.
- 89. The method of claim 87, wherein the DNA molecule is formed by synthesizing a DNA molecule encoding the amino acid sequence of the selected variant, which has an altered amino acid sequence of one or more epitopes of the reference protein.
- 90. The method of claim 87, wherein the reference protein is an industrial enzyme.
- 91. The method of claim 90, wherein the enzyme is a detergent enzyme.
- The method of claim 91, wherein the detergent enzyme is an amylase, cellulase, lipase, 92. oxidase, or protease.
- 93. The method of claim &7, wherein the reference protein is a process enzyme.
- 94. The method of claim 93, wherein the process enzyme is an amylase, cellulase, lipase, or lyase.
- The method of claim 87, wherein the reference protein is a medicinal protein. 95.
- The method of claim 95, wherein the medicinal protein is a hormone or medicinal enzyme. 96.
